

To Create a Studio:

1. Click on the V to the right of your username.
2. From the menu that drops down from your username, choose "My Stuff"
3. In the top right corner of "My Stuff" click the button that says "+ New Studio"
4. The new studio will be entitled "Untitled Studio". You can click on it to rename it.
5. Write down the URL for the studio. *This is important because students need that URL to open the studio and add their projects.* The URL starts the same but has a different number at the end like below:

`http://scratch.mit.edu/studios/#####/`

6. Click the box "Allow anyone to add projects" if students are going to add their projects to this studio.
7. You may add a description of the studio in the box on the left side.
8. Click on "Comments" to choose whether users have the ability to post comments.
